

## PROTECT YOUR HOME & PROPERTY!

Every year fires destroy hundreds of homes and scorch property and landscape. Wildfires can occur with little warning and spread quickly, especially in areas suffering from prolonged drought. Fire crews can be overwhelmed by the task of rapidly advancing wildfires, especially when city and county agencies are fighting multiple fires at once. There might not be enough resources to defend every home. Sometimes, those precious few minutes it takes for crews to get to you are all that is needed to save everything. A garden hose can do very little, especially when fire crews deplete water pressure. Being prepared could make all the difference, and Keene's Fire-Fighter is one tool you cannot afford to be without.

**The water in your pool is all you need as a water source to protect your property!**

## THE KEENE FIRE-FIGHTER

**Model FF13H, Honda GX390 gasoline engine with a Y-Splitter capable of running two fire hoses.**

GX390 49 state compliant not available in Ca.

GX390

This must have tool, built on a cart with 10" tires for ease of access and set up. The Fire-Fighter is equipped with a powerful GX200 Honda gasoline engine and a Keene pump that produces both high pressure and high volume 150 foot head and up to 250 GPM. With 100 feet of hose you can throw stream of water up to 75 feet away! Roll into position next to the pool or water source and it is ready for action. Equipped with a easy diaphragm priming system. Easy starting with a quality Honda motor, just a simple tug on the pull cord and you will be pumping. Unit comes with 100 feet of 1 1/2 inch double wall fire hose and an adjustable nozzle. Also comes with a short 10 foot hose and fitting to do your testing. Home-owners with swimming pools can protect their homes when fire threatens by soaking down roofs, walls and landscaping. Always ready in any emergency, even when water pressure and electrical power fails.

Fire Insurance won't keep the flames away from your home. If you live in drought ravaged areas, especially in the foothills, high fire zones, isolated areas with brush and natural wild growth, you need the Keene Fire-Fighter. Make sure you have this powerful protection to guard everything you have worked so hard for from the disaster of fire!

The FF13H is our latest and largest fire fighting pump capable of pumping greater distances plus easy electric start. The FF13H Powered by a GX390 Honda motor the drives our Keene PHP500 pump. This pump produces up to 400 GPM with a head lift of 161 feet. This will provide ample water for 2 fire hoses working at the same time. The pump is equipped

A third port that can be used to attach a smaller hose even a garden hose for additional protection. Equipped with standard fire threads making it compatible the fire department equipment. The 2.5" Y valve with dual high flow shut off valves for complete control to quickly switch from 1 hose to 2 hoses. The system is both electric start and manual start for redundancy. Mounted on a minimum dolly type cart with large 10" wheels optimizing movement up and down steps and rough terrain. The cart carries 100 feet of double wall fire hose and also our short test hose plus you keep familiar with the system. Equipped with FFNSO nozzle pistol grip w/shut off valve, FFSN fire fighter straight stream nozzle for maximum distance.

## PROTECT YOUR PROPERTY LIKE A PRO!

FF6G

Take your Keene Fire-Fighter to the next level with an extra dose of security and efficiency. Foam concentrates can increase the coverage of a limited water supply, up to five times! Foam breaks down the water's surface tension which ultimately improves water penetration into porous surfaces which ultimately slows evaporation. The bubbles created act as an insulating barrier which help reflect heat away from the treated areas. Why is this important to you? It means that when using the Foam-Fast system, you can protect your property with five times the effectiveness than plain water alone. Comes with three foam-fast cartridges. Each unit comes with a 50 gallons per minute nozzle, a 15 inch long mixing chamber, two pistol grips and an adjustable shut-off handle. The Foam-Fast Ap-plicator is light easy to handle effective method of deploying wetting agent onto a fire.
